ठीक, अब हम A-Series को properly define करते हैं।

यह बहुत important है, क्योंकि AISA = UI / Assistant

AI Mall = Marketplace

A-Series = Power layer / API / Agents / Automation

अगर A-Series सही बना →

आप simple AI app नहीं, platform बनेंगे।

यह discussion deep होगा।

1️⃣ A-Series क्या होना चाहिए (correct definition)

A-Series होना चाहिए:

> AI Tools + APIs + Agents + Workflows + Connectors + Automation + RAG + Model access

Simple language:

AISA = user chat
A-Series = power tools
AI Mall = marketplace

A-Series = Pro / Dev / Enterprise layer

2️⃣ APIs — कौन-कौन सी देनी चाहिए

3 level APIs

✅ Basic API

Cheap / fast

- OpenAI GPT-4.1 / mini
- Gemini flash
- Claude haiku
- Mistral
- Llama

Use case:

- chat
- basic app
- website
- bot

✅ Premium API

High quality

- GPT-4.1
- Claude Sonnet
- Gemini Pro
- Grok
- Mixtral

- DeepSeek

Use case:

- coding
- research
- enterprise
- docs

✅ Ultra API

Expensive

- GPT-4o / 4.1 high
- Claude Opus
- Gemini Ultra
- Sora / video
- SDXL / image ultra
- Runway / video
- Elevenlabs / voice

Use case:

- pro creators

- companies
- studios
- agencies

Must feature

User choose model

This is killer feature.

3️⃣ Connectors — very important

Connectors = real power

Give these:

Storage

- Google Drive
- OneDrive
- Dropbox
- S3

Docs

- Notion

- Docs
- Sheets
- Excel
- PDF

Communication

- WhatsApp API
- Email
- Telegram
- Slack

Dev

- GitHub
- GitLab
- API keys
- Webhooks

Business

- Shopify
- WooCommerce
- Razorpay

- Stripe

Search

- Tavily
- Serper
- Bing
- Google

Database

- Supabase
- Firebase
- Mongo
- Postgres

These give huge value.

---

4 Workflows (very powerful)

Users love automation.

Give:

Content workflow

Idea → script → image → video → post

Business workflow

Lead → email → proposal → invoice

Study workflow

PDF → summary → notes → quiz

Dev workflow

Idea → code → test → deploy

Marketing workflow

Keyword → blog → image → SEO

Research workflow

Search → summarize → report

Agency workflow

Client → task → result → export

Workflows = retention.

5️⃣ AI Agents (must have)

Give ready agents.

Personal agent

- Chat
- Write

- Plan

Research agent

- search
- summarize
- report

Coding agent

- write code
- fix code
- debug

Content agent

- blog
- reel
- script

Design agent

- image
- video

- edit

Business agent

- email
- proposal
- invoice

Study agent

- explain
- notes
- quiz

Data agent

- analyze
- chart
- report

Agents sell.

---

6 Agentic AI (advanced)

This is future.

Give:

Multi-step agent

Goal → plan → execute → result

Auto tool selection

Agent picks:

- search
- code
- image
- doc

Memory agent

Remembers user.

Task agent

Run long tasks.

Team agent

Multiple agents.

RAG agent

Use knowledge base.

Auto workflow agent

Do tasks daily.

This is killer.

---

7 Must add in A-Series

If you add these → strong product

- Model selector
- API keys
- Workflow builder
- Agent builder
- Knowledge base
- Connectors
- Credits usage
- Logs
- History
- Webhooks

This makes platform.

---

8 Correct A-Series structure

```
A-Series
 ├ Models
 ├ APIs
 ├ Agents
 ├ Workflows
 ├ Connectors
```

```
├ Knowledge Base
├ Automation
├ RAG
├ Logs
├ Usage
```

Perfect.

---

9 Important advice

Do not build 100 agents.

Build:

10 strong agents

Not 100 weak.

---

10 If you want next

We design:

A-Series Feature Roadmap (Phase 1 → Phase 5)

This will save months of wrong work.

ठीक। अब हम A-Series Feature Roadmap (Phase 1 → Phase 5) बनाते हैं —

यह roadmap बहुत strategic होगा, ताकि आप एक-एक layer बनाते जाएँ और system टूटे नहीं, cost explode न हो, और revenue भी आता रहे।

यह roadmap ऐसे बनाया है जैसे real AI platform बनता है (OpenAI / Zapier / Langchain / Poe / Replicate style).

Goal:

Phase 1 → usable
Phase 2 → powerful
Phase 3 → automation

Phase 4 → agentic
Phase 5 → platform / ecosystem

✅ PHASE 1 — Core A-Series (Must build first)

Goal = usable power tools for AISA users

Features:

1. Model Selector

User choose model

- GPT
- Claude
- Gemini
- Llama
- Mistral
- DeepSeek

Benefit:

✔ control

✔ cost save

✔ pro users happy

---

2. API Access panel

User can use API inside AISA

- chat api
- image api
- video api
- embedding api

Benefit:

✔ dev users come

✔ enterprise come

---

3. Credits engine (strong)

Already good but improve

Add:

- per tool cost
- per model cost
- logs
- usage chart

Must.

---

4. Knowledge Base (RAG basic)

Upload:

- PDF
- Doc
- TXT
- URL

Use in chat

This is killer feature.

---

5. History + Logs

Show:

- prompts
- model used
- credits used
- result

Pro users need this.

✔ Phase 1 complete → AISA becomes pro tool

✅ PHASE 2 — Connectors + Data layer

Goal = real productivity

Add connectors:

Storage

- Google Drive
- Dropbox
- OneDrive

Docs

- Notion
- Docs
- Sheets

Dev

- GitHub
- API key input
- webhook

Web

- Tavily
- Serper
- Bing

DB

- Supabase
- Firebase
- Mongo

Benefit:

✔ real work possible

✔ enterprise ready

✔ retention high

✅ PHASE 3 — Workflows (Automation layer)

Goal = save time

Add Workflow builder

Example:

Prompt → Image → Video → Post

or

Search → Summary → PDF

or

Lead → Email → Report

Features:

- drag drop
- steps

- triggers
- schedule

Very powerful.

Users stay.

✅ PHASE 4 — Agents (Smart layer)

Goal = intelligent system

Add ready agents:

Research agent

Search + summarize

Content agent

write + image + video

Coding agent

code + fix + run

Business agent

email + proposal

Study agent

notes + quiz

Data agent

analyze

Knowledge agent

RAG

Auto agent

task run

Agents increase value.

✅ PHASE 5 — Agentic AI / Platform

Goal = real AI platform

Add:

Agent builder

User create agent

Multi agent

Agent talks to agent

Long task agent

Runs for minutes

Memory agent

Remembers

Team workspace

Multi user

API marketplace

User sell tools

Workflow marketplace

User share workflow

Agent marketplace

User share agents

Now A-Series becomes platform.

✅ Final structure

```
A-Series
 ├ Models
 ├ APIs
 ├ Credits
 ├ Knowledge Base
 ├ Connectors
 ├ Workflows
 ├ Agents
 ├ Agent Builder
 ├ Automation
 ├ Marketplace
```

Perfect architecture.

✅ Important advice

Do NOT build all together.

Correct order:

Phase 1

→ Phase 2

→ Phase 3

→ Phase 4

→ Phase 5

Otherwise crash.

✅ If you want next

We make:

A-Series Phase-1 Exact Feature List (developer ready)

This will help your team start immediately.

ठीक, अब हम A-Series Phase-1 Exact Feature List (developer ready) बनाएँगे।

यह document ऐसा होगा जिसे आप सीधे dev team को दे सकते हैं।

Goal = Phase-1 में इतना ही बनाना है कि AISA power-tool बन जाए, platform नहीं।

Rule for Phase-1:

No automation
No marketplace
No multi-agent
No heavy workflow

Only power features

Phase-1 = Pro / Dev / Enterprise users को attract करने वाला layer.

✅ PHASE-1 GOAL

AISA + A-Series = Multi-model AI + API + RAG + Logs + Credits + Basic connectors

Phase-1 complete → product sellable

✅ MODULE 1 — Model Selector System

Feature

User can select AI model

Models

- GPT-4.1 / mini
- Gemini
- Claude
- Llama / Mistral
- DeepSeek (optional)

UI

Dropdown:

Select Model

Backend

- model routing
- cost mapping
- usage log

Must have

✔ per model cost

✔ per model limit

✔ per plan access

✅ MODULE 2 — API Access Panel

User can use APIs inside AISA

APIs

- chat api
- image api
- video api
- embedding api

UI

A-Series → APIs

Tabs:

Chat API
Image API
Video API
Embedding API

Features

- show credits cost
- show usage
- run test
- copy result

Optional

API key input (later)

✅ MODULE 3 — Credits Engine (strong version)

Already exist → improve

Add:

Show

- total credits
- used credits
- per tool cost
- per model cost

Add logs

time
tool
model
credits

Add limit

per plan

Add warning

Low credits

Must.

✅ MODULE 4 — Knowledge Base (RAG basic)

This is very important Phase-1 feature.

Upload

- PDF
- DOC
- TXT
- URL

Use

Chat → ask from docs

UI

A-Series → Knowledge

Buttons:

Upload file
Add URL
View docs
Delete docs

Backend

- embeddings
- vector DB
- search

Use:

- Pinecone
- Supabase
- local

Must.

✅ MODULE 5 — History / Logs panel

Pro users need this.

Show

- prompt
- model
- credits
- result

UI

A-Series → Logs

Filters:

- today
- model
- tool

Must.

✅ MODULE 6 — Basic Connectors (Phase-1 small)

Only 3 connectors in phase-1

Do not add 20.

Add:

Google Drive

Upload / read

URL loader

Fetch page

API key input

User add key

UI:

A-Series → Connectors

Add connector
Remove
Status

Enough for phase-1.

✅ MODULE 7 — Plan-based access

Very important.

Each plan can use:

feature	free	starter	pro	business
models	basic	basic	all	all
rag	no	yes	yes	yes
api	no	yes	yes	yes
logs	no	yes	yes	yes
connectors	no	yes	yes	yes

Must implement.

✅ MODULE 8 — Tool cost mapping

Each feature cost different.

Table:

tool	credit
chat	1
search	5

image	20
video	100
rag	10
ultra	50

Backend mapping needed.

Must.

✅ MODULE 9 — Admin control

Admin can change:

- model price
- credit cost
- enable / disable tool
- plan limits

UI:

Admin → A-Series config

Must.

✅ MODULE 10 — Error / fallback system

Very important.

If model fail:

→ fallback model

If credits low:

→ block

If API fail:

→ retry

Must.

✅ Phase-1 FINAL LIST

✔ Model selector
✔ API panel
✔ Credits engine strong
✔ Knowledge base (RAG)
✔ Logs panel
✔ Basic connectors
✔ Plan limits
✔ Cost mapping
✔ Admin control
✔ Error fallback

This is perfect Phase-1.

Do not add more.

✅ Next step (after this)

Phase-2 = Connectors + Workflows

Phase-3 = Agents

Phase-4 = Agentic

Phase-5 = Platform

✅ If you want next we make:

A-Series Phase-2 Feature List (Connectors + Workflows)

This is where product becomes powerful.

ठीक। अब Phase-1 के बाद सबसे important layer आती है —

Phase-2 = Connectors + Workflows (Real productivity layer)

यहीं से A-Series useful बनता है,

और यहीं से users paid plan लेना शुरू करते हैं।

Phase-2 का goal:

User ka real kaam ho
Automation ho
Data connect ho
Time bache

NOT goal:

❌ fancy AI

❌ new models

❌ new UI

Goal = usefulness

✅ PHASE-2 GOAL

AISA + A-Series + Connectors + Workflows
= real work platform

After Phase-2 → product sellable to companies

✅ MODULE 1 — Connectors System (Core)

Phase-2 में connectors add होंगे.

लेकिन rule:

10 strong connectors
not 50 weak

Category 1 — Storage

- Google Drive
- OneDrive
- Dropbox

Use:

- read file
- write file
- save result

Category 2 — Docs

- Google Docs

- Google Sheets
- Excel upload
- PDF loader

Use:

- summary
- edit
- report
- analysis

Category 3 — Web / Search

- Tavily
- Serper
- Bing
- URL loader

Use:

- research
- scraping
- news

- info

Category 4 — Dev / API

- API key input
- webhook
- REST call
- JSON call

Use:

- automation
- integration
- dev users

Category 5 — Communication

- Email send
- Email read
- Telegram
- WhatsApp API (later)

Use:

- send report
- send result
- notify

Category 6 — Database

- Supabase
- Firebase
- Mongo
- Postgres

Use:

- store result
- read data
- query

Phase-2 connector UI

A-Series
→ Connectors
  → Add
  → Remove
  → Status

✅ MODULE 2 — Workflow Engine (very important)

This is killer feature.

Workflow = multi step AI

Example:

Search → Summarize → PDF → Email

or

Prompt → Image → Video → Save

or

PDF → Notes → Quiz

Must features

✔ create workflow

✔ multi step

✔ select tool

✔ save workflow

✔ run workflow

UI:

A-Series → Workflows

Step types

- chat

- image
- video
- search
- rag
- file
- api
- connector

✅ MODULE 3 — Workflow Builder UI

Simple UI needed.

Not complex.

Required:

Step 1
Step 2
Step 3

Each step:

- choose tool
- choose model
- choose connector
- set prompt

Add:

Save template

✅ MODULE 4 — Workflow Templates

Give ready workflows.

Users love this.

Add:

Content workflow

Idea → Script → Image → Post

Study workflow

PDF → Summary → Notes

Research workflow

Search → Report

Business workflow

Lead → Email → Proposal

Dev workflow

Idea → Code → Test

Marketing workflow

Keyword → Blog → SEO

Templates = retention.

✅ MODULE 5 — Scheduled Workflows

Very powerful.

User can run:

Daily

Weekly

Manual

Example:

Daily news summary

Daily report

Daily email

Add:

Schedule
Run now
Logs

✅ MODULE 6 — Workflow Logs

Show:

- run time
- steps
- result
- credits

Pro users need.

✅ MODULE 7 — Workflow + Connectors link

Important.

Workflow can use:

Drive

Docs

API

Email

DB

This makes system real.

✅ MODULE 8 — Plan limits

Example:

plan	workflows
free	0
starter	2
pro	10
business	unlimited

Same for connectors.

Must.

✅ MODULE 9 — Cost control

Each step cost.

Must show:

credits per step

Add warning:

High cost workflow

Very important.

✅ MODULE 10 — Admin control

Admin can:

- enable connectors
- disable
- set cost
- set limit
- set plans

Must.

✅ PHASE-2 FINAL LIST

✔ Connectors system
✔ Storage connectors
✔ Docs connectors
✔ Web connectors
✔ API connectors
✔ DB connectors
✔ Workflow engine
✔ Workflow builder
✔ Templates
✔ Schedule
✔ Logs
✔ Plan limits
✔ Cost mapping
✔ Admin control

Perfect Phase-2.

After Phase-2

Product becomes:

not AI chat

but

AI productivity platform

Next phase (very powerful)

Phase-3 = Agents

This is where product becomes dangerous.

If you want, next:

A-Series Phase-3 Feature List (Agents)

ठीक। अब हम पहुँच गए हैं Phase-3 = Agents Layer पर।

यहीं से A-Series साधारण AI tool से निकलकर real AI platform बनता है।

Phase-1 = Models + RAG

Phase-2 = Connectors + Workflows

Phase-3 = Agents

Phase-4 = Agentic AI

Phase-5 = Platform / Marketplace

Phase-3 का goal:

User ko tool nahi
ready AI worker mile

Agents = automation + intelligence + workflow + memory

✅ PHASE-3 GOAL

AISA + A-Series + Workflows + Agents
= AI workforce

यह feature enterprise को attract करेगा।

✅ MODULE 1 — Agent System Core

Agent = predefined AI role

Each agent has:

- model

- prompt
- tools
- workflow
- memory
- connectors

Agent structure:

```
Agent
 ├ Model
 ├ Prompt
 ├ Tools
 ├ Workflow
 ├ Memory
 ├ Connectors
```

Must implement.

✅ MODULE 2 — Agent Dashboard

UI:

A-Series → Agents

Show list:

- Research Agent
- Content Agent
- Coding Agent
- Business Agent

- Study Agent
- Data Agent
- Design Agent
- Automation Agent

User click → run

Must simple.

✅ MODULE 3 — Default Agents (Phase-3)

Start with 8-10 agents only.

1. Research Agent

Use:

- search
- rag
- summarize

Use case:

report

news

analysis

---

2. Content Agent

Use:

- chat
- image
- video

Use case:

blog

reel

script

caption

---

3. Coding Agent

Use:

- code model
- file
- logs

Use case:

code

fix

debug

---

4. Business Agent

Use:

- email
- docs
- chat

Use case:

proposal

invoice

mail

---

5. Study Agent

Use:

- pdf
- rag
- notes

Use case:

study

summary

quiz

---

6. Data Agent

Use:

- csv
- table
- chart

Use case:

analysis

report

---

7. Design Agent

Use:

- image
- video
- edit

Use case:

logo

banner

video

---

8. Automation Agent

Use:

- workflow

- schedule
- connectors

Use case:

daily task

report

mail

---

9. Knowledge Agent

Use:

- rag
- docs
- url

Use case:

company knowledge

---

10. Dev Agent

Use:

- API
- JSON
- webhook

Use case:

integration

✅ MODULE 4 — Agent Builder (Basic)

User can create agent.

UI:

Create Agent

Fields:

- name
- model
- prompt
- tools
- workflow
- connector

No complex UI yet.

Phase-3 simple builder.

✅ MODULE 5 — Agent Memory (basic)

Agent remembers last tasks.

Store:

- prompts
- result
- context

Use DB / vector.

Must basic.

✅ MODULE 6 — Agent + Workflow link

Agent can run workflow.

Example:

Content Agent → workflow → post

Important.

✅ MODULE 7 — Agent + Connector link

Agent can use:

Drive

Docs

Email

API

DB

This makes real agent.

✅ MODULE 8 — Agent Usage Limits

Plans:

plan	agents
free	0
starter	2
pro	5
business	20

Add.

✅ MODULE 9 — Agent Logs

Show:

- agent used
- steps
- credits
- result

Must.

✅ MODULE 10 — Admin Agent Control

Admin can:

- enable agent
- disable
- change cost
- change model

Must.

✅ PHASE-3 FINAL LIST

✔ Agent system
✔ Agent dashboard
✔ 8-10 default agents
✔ Agent builder basic
✔ Agent memory basic
✔ Agent + workflow
✔ Agent + connectors
✔ Agent limits
✔ Agent logs
✔ Admin control

Perfect Phase-3.

After Phase-3

Product becomes:

AI tools ❌
AI platform ❌
AI workforce ✅

Next phase (dangerous level)

Phase-4 = Agentic AI

This is where:

Auto plan

Auto execute

Multi agent

Long tasks

If you want next:

A-Series Phase-4 Feature List (Agentic AI)

अब हम पहुँच गए हैं Phase-4 = Agentic AI Layer पर।

यहीं से A-Series साधारण agents से आगे बढ़कर autonomous AI system बनता है।

यह वही layer है जो आज दुनिया में सबसे advanced मानी जाती है (Auto-GPT type, multi-agent systems, long-task AI, orchestration engines).

Phase-4 का goal:

User → Goal
AI → plan → tools → agents → execution → result

यानी user prompt नहीं देगा, goal देगा।

यह बहुत powerful है, इसलिए Phase-4 बिना Phase-3 stable हुए शुरू नहीं करना चाहिए।

✅ PHASE-4 GOAL

AISA + A-Series + Agents + Workflows
= Agentic AI System

Meaning:

- AI खुद decide करेगा
- कौन सा tool
- कौन सा model
- कौन सा workflow
- कौन सा connector

✅ MODULE 1 — Goal-Based Agent System

New mode:

Goal Mode

User input:

Create marketing campaign
Build website
Make research report
Analyze my data

Agent does:

plan
select tools
run steps
return result

Required features:

- planner
- executor
- tool selector
- step runner

Must.

✅ MODULE 2 — Planner Engine

Agentic AI का brain.

Planner does:

Goal → steps

Example:

Goal:

Create blog

Plan:

Search topic
Write outline
Write article
Generate image
Export

Implementation:

- LLM planning prompt

- step generator
- step list

Must.

✅ MODULE 3 — Tool Selection Engine

Agent chooses tool automatically.

Example:

Need search → Tavily
Need image → SDXL
Need chat → GPT
Need doc → RAG
Need file → Drive

Required:

Tool registry

tool name
type
cost
input
output

Agent selects.

Very important.

✅ MODULE 4 — Multi-Step Executor

Agent runs steps one by one.

Flow:

step 1 → run
step 2 → run
step 3 → run
step 4 → run

Need:

- queue
- state
- retry
- logs

Must.

✅ MODULE 5 — Long Task System

Agent can run long job.

Example:

- big report
- long research
- video generation
- data analysis

Need:

background task
progress
status
resume

UI:

Tasks
Running
Completed
Failed

Must.

✅ MODULE 6 — Multi-Agent System

Multiple agents work together.

Example:

Research agent
→ Content agent
→ Image agent
→ Report agent

Need:

Agent chain.

Structure:

Agent A → Agent B → Agent C

Must basic version.

✅ MODULE 7 — Memory System (advanced)

Agent remembers user.

Memory types:

- short memory
- long memory
- knowledge memory

Store:

user history
documents
preferences
tasks

Use:

vector DB.

Very important for agentic.

✅ MODULE 8 — Task Templates

Give ready goals.

Example:

Create blog
Make report
Study PDF
Build app idea
Marketing plan

User clicks → agent runs.

Users love this.

✅ MODULE 9 — Agent Permissions

Agent can access:

- connectors
- files
- APIs
- workflows

Need permission system.

Example:

Allow Drive
Allow Email
Allow API

Must.

Security.

✅ MODULE 10 — Cost Control for Agentic

Agentic AI = expensive.

Need:

- max steps
- max credits
- max time
- plan limit

Example:

Starter → 5 steps
Pro → 20
Business → 100

Must.

✅ MODULE 11 — Agent Logs / Debug

Show:

goal
steps
tools
credits
time
result

Needed for pro users.

✅ MODULE 12 — Admin Agent Control

Admin can:

- enable tools
- disable tools
- change cost
- change step limit
- change model

Must.

✅ PHASE-4 FINAL LIST

✔ Goal mode
✔ Planner engine
✔ Tool selector
✔ Step executor
✔ Long task system
✔ Multi-agent chain
✔ Memory system
✔ Task templates
✔ Permissions
✔ Cost control
✔ Logs
✔ Admin control

This = real Agentic AI.

After Phase-4

Product becomes:

Chatbot ❌
Tool ❌
Agent ❌
Agentic AI ✅

Very few products reach here.

Next Phase (last)

Phase-5 = Platform / Marketplace / Ecosystem

This is where AI-Mall + A-Series merge.

If you want next:

A-Series Phase-5 Feature List (Platform / Marketplace / Ecosystem)

अब हम आखिरी और सबसे बड़ा phase पर हैं —

Phase-5 = Platform / Marketplace / Ecosystem Layer

यहीं पर A-Series, AISA और AI-Mall मिलकर AI Operating Platform बनते हैं।

यह stage बहुत कम products तक पहुँचती है।

इस phase में आप सिर्फ AI app नहीं, बल्कि AI infrastructure company बनते हैं।

Goal:

Users + Developers + Agents + Tools + Workflows
all in one ecosystem

Phase-5 बिना Phase-4 stable हुए नहीं करना चाहिए।

✅ PHASE-5 GOAL

AISA = interface
A-Series = engine
AI Mall = marketplace

Phase-5 = ecosystem

Result:

AI Platform / AI OS / AI Marketplace

✅ MODULE 1 — Tool Marketplace (AI Mall integration)

Users tools use ही नहीं, add भी कर सकें।

Features:

- tool listing
- tool upload
- API tool
- affiliate tool
- internal tool
- external tool

Tool fields:

name
description
API
credits cost
model
category
tags
provider

Must.

✅ MODULE 2 — Agent Marketplace

Users agents use भी करें, publish भी करें।

Example:

- Marketing agent
- SEO agent
- Trading agent
- Coding agent

- Study agent

Features:

- create agent
- publish agent
- private / public
- premium / free

Structure:

Agent Store

Very powerful.

✅ MODULE 3 — Workflow Marketplace

Users workflow share कर सकें।

Example:

- blog workflow
- video workflow
- research workflow
- automation workflow

Features:

- create
- share
- sell
- copy

UI:

Workflow Store

Retention increases.

✅ MODULE 4 — Developer Platform

Devs can build for A-Series.

Features:

- API keys
- SDK
- webhooks
- plugin system
- tool upload

Dev panel:

Developer → API → Tools → Agents

Needed for ecosystem.

✅ MODULE 5 — Plugin System

Users add plugins.

Example:

- Gmail plugin
- Shopify plugin
- Notion plugin
- WhatsApp plugin

Plugin structure:

plugin
api
permission
credits

Must.

✅ MODULE 6 — Team / Workspace System

Enterprise feature.

Add:

- team users
- roles
- shared agents

- shared workflows
- shared knowledge

Plans:

plan	workspace
free	no
pro	1
business	many

Needed for companies.

✅ MODULE 7 — Private Knowledge / Enterprise RAG

Companies upload:

- docs
- db
- pdf
- api

Use with agent.

Features:

- private
- secure
- tenant

Enterprise needs this.

✅ MODULE 8 — Billing / Revenue System (important)

Now marketplace revenue comes.

Add:

- commission
- vendor payout
- tool pricing
- agent pricing
- workflow pricing

Structure:

User pays
→ platform cut
→ vendor gets

Must for ecosystem.

✅ MODULE 9 — Permissions / Security / RBAC

Platform level security.

Add:

- role control
- tenant isolation
- API security
- logs
- audit

Needed for enterprise.

✅ MODULE 10 — AI Routing / Cost Engine (advanced)

System chooses model automatically.

Example:

cheap → llama
normal → gpt
pro → opus
ultra → video

Needed for scaling.

✅ MODULE 11 — Analytics Platform

Show:

- usage
- tools
- agents
- credits
- cost
- revenue

For:

user

admin

vendor

Must.

✅ MODULE 12 — AI OS Dashboard

Final UI.

Tabs:

AISA
Agents
Workflows
Tools
Knowledge
Connectors
Tasks

Marketplace
Team
Billing
Logs

This becomes OS.

✅ PHASE-5 FINAL LIST

✔ Tool marketplace
✔ Agent marketplace
✔ Workflow marketplace
✔ Developer platform
✔ Plugin system
✔ Team workspace
✔ Enterprise RAG
✔ Billing / commission
✔ Security / RBAC
✔ AI routing engine
✔ Analytics
✔ AI OS dashboard

This = full ecosystem.

Final Architecture

Phase-1 → Models + RAG
Phase-2 → Connectors + Workflows
Phase-3 → Agents
Phase-4 → Agentic AI
Phase-5 → Platform / Marketplace / Ecosystem

You now have full roadmap.
